

Historic Oregon Glaciers Photographs

OREGON GLACIERS INSTITUTE

We are looking for photographs you may have of Oregon glaciers that predate 2010. Ideally, these photographs would be from the summer to fall and hopefully late summer to mid fall (August to October). These photographs will help the Oregon Glaciers Institute reconstruct glacier change over the last century. From these data, models can be constructed to forecast glacier viability in the face of global warming.

We provide a list of glaciers we are interested in below as well as locations of these glaciers in the following maps. Maps below are from: www.glaciers.us.

The preferred file format is a .jpg (or .jpeg), whether from a digital camera or scanned film or slides; other formats will still be much appreciated. If you have physical photographs but no means of scanning them, please contact us to determine how to proceed with converting the photograph to digital. Along with the file, please include the location from which the picture was taken (preferably latitude and longitude), which glacier is in the picture, and date of the photograph. Please submit photographs to orglaciersinst@gmail.com

TABLE OF GLACIERS BY MOUNTAIN					
Mt. Hood	Mt. Jefferson	North Sister	Middle Sister	South Sister	Broken Top
Zigzag	Jefferson Park	Linn	Hayden	Clark	Crook
Palmer	Russell	Villard	Diller	Lewis	Bend
White River		Thayer	Irving	Prouty	No-Name
Newton Clark		Collier	Renfrew	Carver	
Eliot				Skinner	
Langille				Eugene	
Coe				Lost Creek	
Ladd					
Glisan					
Sandy					
Reid					

While not mapped or recognized by the U.S. Geological Survey or U.S. Forest Service, we could use photographs of Jack glacier that used to exist along Canyon Glacier trail on the east side of Three Fingered Jack.

We are also interested in photographs of Benson Glacier on Eagle Cap in the Wallowa Wilderness.

Mt. Hood: Zigzag, Palmer, White River, Newton Clark, Eliot, Langille, Coe, Ladd, Glisan, Sandy, Reid

Mt. Jefferson: Jefferson Park, Russell

Note photographs of Waldo and Whitewater are also needed but we note that these glaciers are not along traditional hiking routes.

Similarly, photographs of now-gone glaciers of Milk Creek and Timberline are also needed. Their locations are indicated by red (Milk Creek) and green (Timberline) arrows below.

North Sister: Linn, Villard, Thayer, Collier
Middle Sister: Hayden, Diller, Irving, Renfrew
South Sister: Clark, Lewis, Prouty, Carver, Skinner, Eugene, Lost Creek

Broken Top: Crook, Bend, the glacier that deposited in the moraine that makes No-Name lake (location indicated by red arrow on map).
